

Video Conferencing & Virtual Meetings

CIT provides services that allow NIH employees to create online meeting spaces for webinars and training between two or more conference rooms using a television-style signal and large-scale meetings (up to 1,000 participants). These virtual meeting spaces include features like screen sharing, file sharing, a virtual white board, polls, and breakout rooms. Meetings can also be recorded and viewed later.

OFFERINGS

Webex

Hold virtual meetings and share documents, images, and video with colleagues around the world. Some key [Webex](#) features include: the ability to record meetings, host meetings with 25 or more people, give control to remote presenters, and personal meeting rooms for reoccurring meetings. Webex is also compatible with conference rooms at NIH.

Skype for Business

Host small collaboration sessions with HD video and web conferencing capabilities such as sharing documents and images and live chat.
